Foil Structure

Property

1. This foil laminate is able to provide the best barrier property for the package, and fulfill the fragrance protection for roasted coffee beans.
2. This foil laminate is 4 layers with aluminum foil, and the second layer of PET film can be removed as of cost consideration, however the performance of final package is not as good as original one. As aluminum foil is metal sheet without elongation, and the elongation rate of inner LDPE sealing layer may reach 1600~1800%, the serious un-parallel of elongation of the two close-touched layers may cause delamination problem or even damage on aluminum foil, which will fundamentally ruin the property of the coffee package.
3. All the materials used in produce of this coffee package is subject human health grade. You can check the SDS sheet and SGS test report here.[\(Click\)](#)

Matte Finish

Matte finish is realized by coating a lacquer varnish on top in high purity, and after elegant bag-making, there are free of small hidden scratch lines on the bag surface.

Custom Print

We realize the custom print by rotogravure printing up to 10 colors that is able to achieve the best effect for most of customer artworks.

1. One color will have to need one cylinder to realize print, so that will be further cost for cylinder USD 90/Cylinder.
2. Please confirm on the sizes of bag you need and [reach us](#) for design template if this 12oz design template does not suit your package.
